STEEL gives ALL 3 to your new car

From headlight to rear bumper every automobile has over a ton of steel... Why?

For the strength and solidity that spell safety — it's tough, long-lasting steel in frame and body, and spring steel specially treated for just the right resiliency.

For graceful curve of body line, for smooth hard surface, for resistance to dents and scratches — it's ductile

and very strong sheet steel, of course. For a bright trim that never corrodes — that's stainless steel.

For dependable power year in and year out — a whole family of special alloy steels in engine and transmission, each chosen because it's the best.

For the one material for safety, strength, and peace of mind in your automobile insist on — Steel... metal of a million uses
